

THE SKY IN A ROOM VELUX IN FRONT OF MUSEION FROM 17 MAY UNTIL 7 JUNE 2019

A cube painted completely black on the outside, yet surprisingly bright within, thanks to the magic created by VELUX as it transforms zenithal light into a sensorial array of iridescent colours. Upon entering the cube, a new and unexpected dimension awaits. Positive feelings are invoked by the natural light that streams in directly from the sky through the VELUX window positioned in the roof of the cube. More light for a better quality of life: this is the message held within the VELUX cube. VELUX has been the market leader for roof windows for over 75 years. The Danish company offers modular solutions of a high technological profile, adaptable to any kind of roof and line with the latest innovational and architectural trends. From 17 May until 7 June the VELUX cube can be visited on the terrace of Museion, on the side of the building facing the River Talvera.
